

RISIO[®]

retainers

Smiles
that last longer

Maintain results with our state-of-the-art RISIO removable retainer.

RISIO, our new cutting-edge teeth retention solution provides you with an easy and comfortable way to maintain your teeth straightening treatment results.

RISIO retainers are durable, comfortable and virtually invisible. They are removable, giving you a more flexible approach to your usage program.

RISIO is specifically engineered for your mouth by our leading orthodontic laboratories and is accompanied by a personalised treatment plan supplied by your dentist which adjusts to your needs and tells you when and for how long you need to use your retainers.

The importance of retainers

Every teeth alignment procedure is incomplete without the follow up of retainers. Retainers prevent teeth from slowly moving back to their original place.

Traditionally, the only option was metal retainers which are fixed to the back of the teeth.

Now plastic retainers offer another removable option which is becoming increasingly popular. We have developed RISIO as a discreet and comfortable way of keeping your teeth in place and maintain the fantastic results achieved by teeth alignment treatment.

RISIO retainers are comfortable, virtually invisible and entirely custom-made to your teeth. Instead of being worn 24/7 like traditional metal retainers, depending on your usage programme, you will have a lot more flexibility on when you wear them as you have the ability to remove and replace.

Where is RISIO manufactured?

RISIO is manufactured by the UK's leading dental manufacturing group, ALS Dental. We ensure the utmost care is taken when designing every retainer. Using the most advanced equipment on the market, accuracy and a perfect finishing trim on every retainer is guaranteed.

RISIO uses the most sophisticated dental materials on the market for the ultimate comfort.

grade material

2

Custom made
to fit your mouth

3

Resistant
to breakage

4

Virtually invisible,
removable and
comfortable

5

Stylish and useful
retainer case

6

Stain repellent

FAQs

Can RISIO retainers move teeth or close gaps?

No. RISIO retainers are strictly a post-orthodontic device for teeth that have already been treated. They're not designed to actively move teeth, and so can't be used as a replacement for braces or aligner trays.

How do I take care of my RISIO retainers?

Cleaning your retainers after every use removes bacteria and calcium deposits. A soft bristle toothbrush and clean water combined with a specially designed dental soak are important for its upkeep. RISIO retainers need to be cleaned separately from your teeth. Professional cleaning is also available.

How long do I need to wear my RISIO retainer?

Your detailed treatment plan is adapted to your particular needs. Your dentist will provide you with clear easy to follow instructions as for when and how long your retainers need to be worn. It is normally highly recommended to wear your retainers every night.

Do I need to wear my retainers forever?

In order to maintain results achieved by teeth straightening, you will have to keep up maintenance for the rest of your life. However, as time goes by, you'll be required to wear it less; sometimes just a few times a week.

Can my retainers be adjusted?

Absolutely! If you think something is wrong, contact your dentist and they will be able to arrange adjustments. RISIO is designed to enhance your comfort.

If you know RISIO is for you, speak to your dentist about your new RISIO retainers today or contact us below to find out more.
