

RISIO[®]

retainers

Smiles that last

Maintain results with our state-of-the-art RISIO removable retainers

RISIO retainers are the perfect teeth retention solution which provides you with an easy and comfortable way to keep your teeth straight following your aligner treatment.

RISIO retainers are durable, comfortable and virtually invisible. They are removable, giving you a flexible approach to your usage program.

Our RISIO retainers are specifically engineered for your mouth by our leading orthodontic laboratory. We also develop a personalised treatment plan for you which we provide to your dentist, detailing when and how long you should wear your retainers.

The importance of retainers

A teeth alignment procedure is not complete without the follow-up of retainers. Retainers prevent teeth from slowly moving back to their original place.

Traditionally, the only option was metal retainers which are fixed to the back of the teeth. Now, plastic retainers offer another removable option which is becoming increasingly popular. We have developed RISIO as a discreet and comfortable way of keeping your teeth in place and maintain the fantastic results achieved by teeth alignment treatment.

Where is RISIO manufactured?

RISIO is manufactured in the UK by the ALS Dental Group. We ensure the utmost care is taken when designing every retainer. Using the most advanced equipment on the market, accuracy and a perfect finishing trim on every retainer is guaranteed.

Additionally RISIO uses the most sophisticated dental materials on the market for the ultimate comfort.

grade material

2

Custom made
to fit your mouth

3

Resistant
to breakage

4

Virtually invisible,
removable and
comfortable

5

Stylish and useful
retainer case

6

Stain repellent

FAQs

Can RISIO retainers move teeth or close gaps?

No. RISIO retainers are strictly a post-orthodontic device for teeth that have already been treated. They're not designed to actively move teeth, and so can't be used as a replacement for braces or aligner trays.

How do I take care of my RISIO retainers?

Cleaning your retainers after every use removes bacteria and calcium deposits. A soft bristle toothbrush and clean water combined with a specially designed dental soak are important for its upkeep. RISIO retainers need to be cleaned separately from your teeth.

How long do I need to wear my RISIO retainer?

Your detailed treatment plan is adapted to your particular needs. Your dentist will provide you with clear, easy to follow instructions for when and how long your retainers need to be worn. It is normally highly recommended to wear your retainers every night.

Do I need to wear my retainers forever?

In order to maintain results achieved by teeth straightening, you will have to keep up maintenance for the rest of your life. However, as time goes by, you'll be required to wear it less; sometimes just a few times a week.

Can my retainers be adjusted?

Absolutely! If you think something is wrong, contact your dentist and they will be able to arrange adjustments. RISIO is designed to enhance your comfort.

If you know RISIO is for you, speak to your dentist about your new RISIO retainers today, or contact us to find out more.

What happens if I lose a retainer?

We recommend you purchase two sets of retainers so you always have a spare. However if you do need a replacement, speak to your dentist and they will easily be able to order your replacements from us.
