

RISIO[®]

clear aligners

Smile with confidence

Create the smile you always
wanted with RISIO Clear Aligners

What are RISIO Clear Aligners?

RISIO Clear Aligners are a fantastic way to straighten teeth without the need for traditional metal braces. They are custom-made to fit each patient's unique smile, moving teeth into the desired position quickly and safely. RISIO is a brand of clear aligners that are designed to be comfortable and discreet, allowing you to achieve your perfect smile without anyone knowing you are wearing them.

RISIO Clear Aligners are designed to deliver fantastic results in a shorter amount of time than traditional braces. They are perfect for people looking for a fast and effective treatment option that won't impact their daily lives.

Why choose RISIO Clear Aligners:

- **Manufactured in the UK** – receive your aligners in as few as 5 days
- **Shorter average treatment** than traditional braces
- **Convenient:** can be removed for eating, brushing and flossing
- **Safe:** moves teeth into position quickly and safely
- **Comfort:** due to our superior, smooth material
- **Environmentally friendly packaging**

UK manufacture and supply chain

Unlike other major aligner providers who manufacture and outsource overseas, we manufacture your aligners here in the UK. We have full control of our supply chain, minimising our environment impact as products do not need to be imported or flown long distances. This means we reduce the carbon footprint as well as ensure a faster service for dentists and their patients. If you care about the environment, then RISIO is a greener choice.

Get your aligners faster

Our UK production facility allows us to ensure that our aligners are made to the highest quality standards with the latest technology available and provide faster turnaround time. Your dentist can have your aligners ready for you in a few as 5 days from your appointment.

What are the advantages of RISIO Clear Aligners over traditional braces?

Compared to traditional braces, clear aligners provide several advantages.

Firstly, clear aligners are much more discreet as they blend in with your natural smile and no one needs to know you're wearing them.

Secondly, they move teeth into the desired position quickly and safely using advanced digital technology support by experienced orthodontic technicians.

RISIO Clear Aligners are also more comfortable than metal

braces as the smooth material doesn't cause painful rubbing against the soft tissues when compared to metal brackets. They are designed to move teeth without causing any discomfort or irritation.

You will be able to visualise your smile journey and end result of your treatment with our RISIO smile simulation preview that your dentist will be able to show you.

Finally, clear aligner treatment is much more convenient as you can remove them for eating, brushing or flossing – something not possible with traditional braces!

Health Benefits of RISIO Clear Aligners

As well as improving the aesthetic appearance of your teeth and smile, straightening your teeth with RISIO Clear Aligners can also benefit your dental health in many ways.

- ▶ Reducing dental crowding or closing spaces allows for better cleaning and oral hygiene.
 - ▶ Aligning upper and lower dental arches can improve jaw function.
 - ▶ Correction of the bite of the teeth so that the front teeth meet on closing and the back teeth mesh together.
 - ▶ Reducing the likelihood of damage to prominent teeth.
 - ▶ Accommodating impacted, unerupted or displaced teeth.
 - ▶ Reversing the drifting of the teeth which occurs over time.
- Misaligned teeth are more likely to suffer from cavities, decay and other related problems.

How do RISIO Clear Aligners work

RISIO Clear Aligners work by gently and gradually shifting the teeth into their desired position. They are designed to be worn for 20-22 hours a day, with occasional breaks for eating and oral hygiene. Each set of aligners is worn for one or two weeks before being replaced with the next set in the treatment plan.

The aligners exert a small amount of force on the teeth, which causes them to move gradually into the corrected position. As the teeth shift, the aligners are gradually replaced with new sets to continue the treatment process. The entire course of treatment will be monitored by your dentist to ensure that the teeth are moving as planned and to make any necessary adjustments.

Designed and approved by GDC registered dental professionals

RISIO Clear Aligners are designed by UK registered dental professionals who have

over 15 years of experience in the field of orthodontics. Our professionals are based at Veus Dental Laboratory and Ashford Orthodontics, the UK's leading orthodontics manufacturer.

Who can use RISIO Clear Aligners?

RISIO Clear Aligners are designed for adults and teenagers with mild to moderate malocclusion (misalignment of the teeth) who want to straighten their teeth without traditional braces. The clear aligners are custom-made for each patient which ensures the best results and comfortable fit.

RISIO Clear Aligners are a great option for patients who want to improve their smile without the hassle and visibility of traditional braces. With our clear aligners, you can achieve the smile you've always wanted without sacrificing their appearance or lifestyle.
